

Java

```
class Solution {  
    public String kthDistinct(String[] arr, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string[]} arr  
 * @param {number} k  
 * @return {string}  
 */  
var kthDistinct = function(arr, k) {  
  
};
```

TypeScript

```
function kthDistinct(arr: string[], k: number): string {  
  
};
```

C++

```
class Solution {
```

```
public:
    string kthDistinct(vector<string>& arr, int k) {

    }
};
```

C#

```
public class Solution {
    public string KthDistinct(string[] arr, int k) {

    }
}
```

Kotlin

```
class Solution {
    fun kthDistinct(arr: Array<String>, k: Int): String {

    }
}
```

Go

```
func kthDistinct(arr []string, k int) string {

}
```
